

# **Water Quality Program Initial Assessment**

**Presentation to CALFED  
Bay-Delta Public Advisory Committee**

**BROWN AND  
CALDWELL**

Cindy Paulson, Ph.D.  
Brown and Caldwell  
June 8, 2005

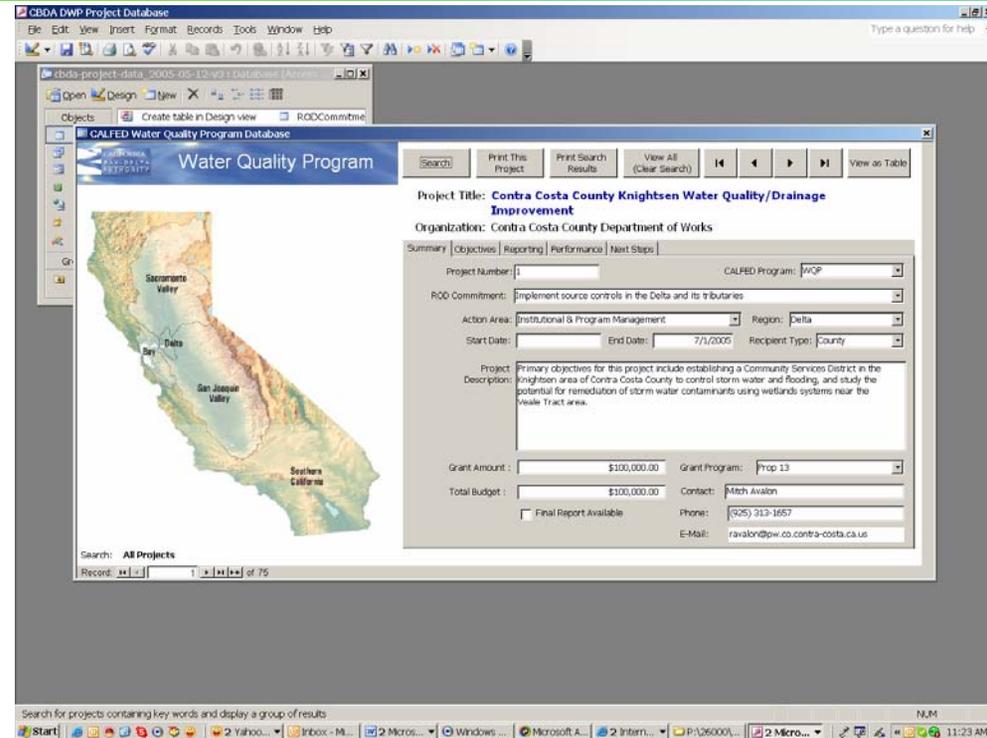

# Overview of Today's Presentation

- Assessment process
- Key results
- Conclusions and recommendations

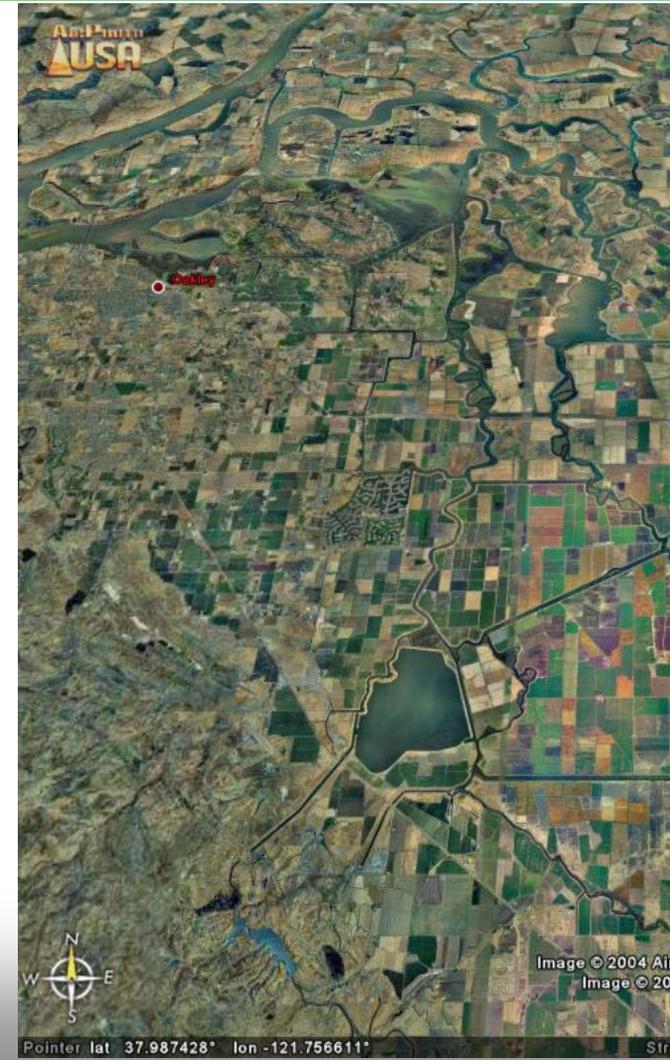

# Assessment Process

- Project documentation
  - Surveys
  - Interviews
  - Database
- Preliminary results
  - Existing water quality
  - Performance measures
- Review and refinement
  - Feedback and input
  - DWS, CUWA, and participating agencies

# Existing Delta Water Quality

- Challenges in characterization
  - Complex system
  - Data and tools not fully developed
- Extensive feedback and input
  - More comprehensive characterization
  - Overview of new tools
  - No conclusions yet
- Basis for future assessment

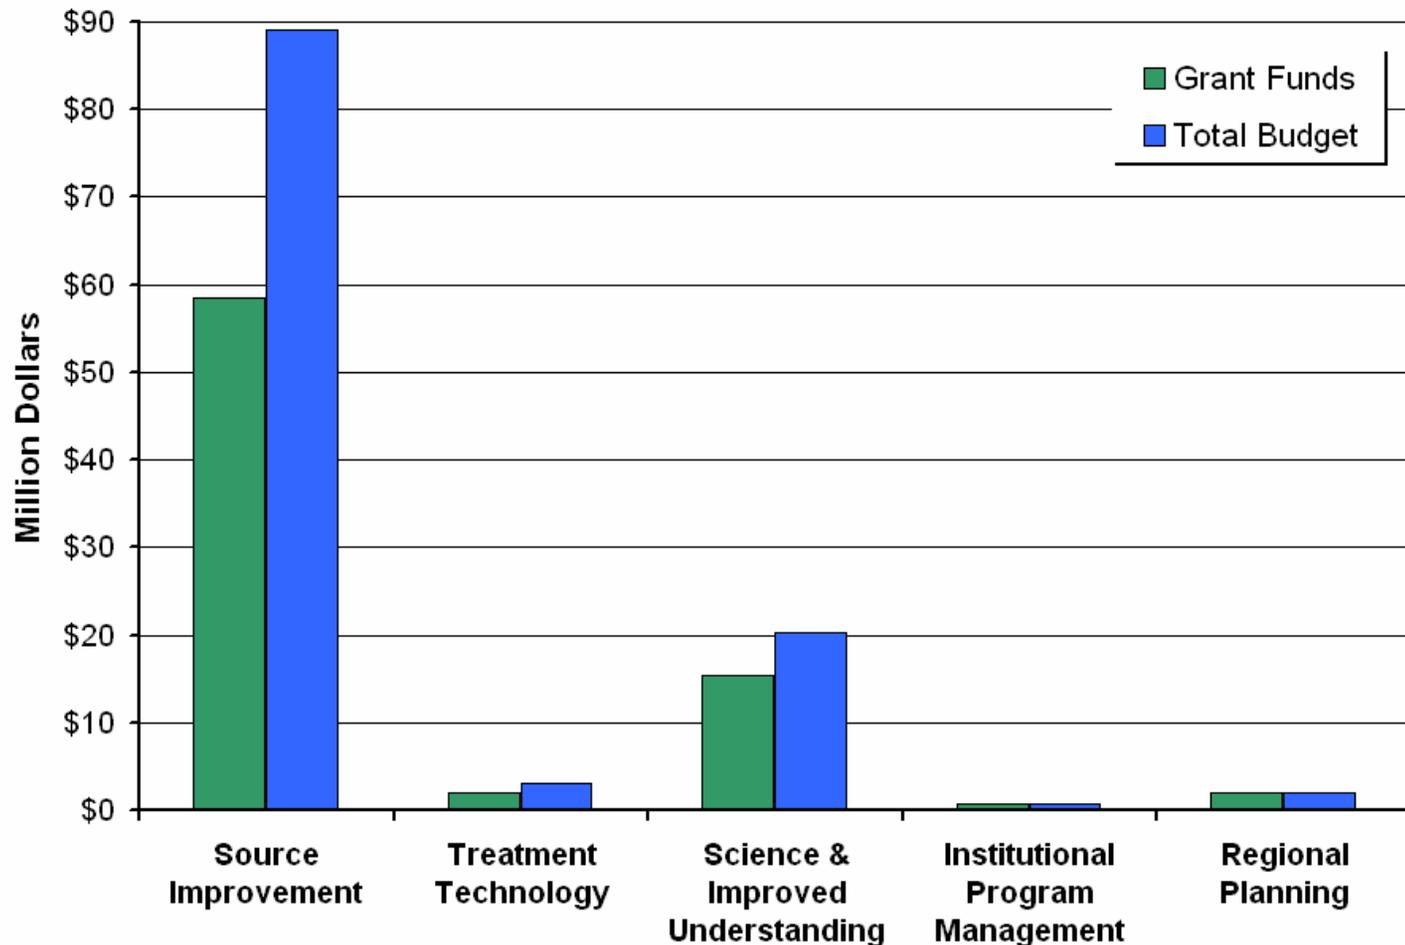

# Measures of Progress

*“Progress toward meeting CALFED water quality targets and alternative treatment technologies”*

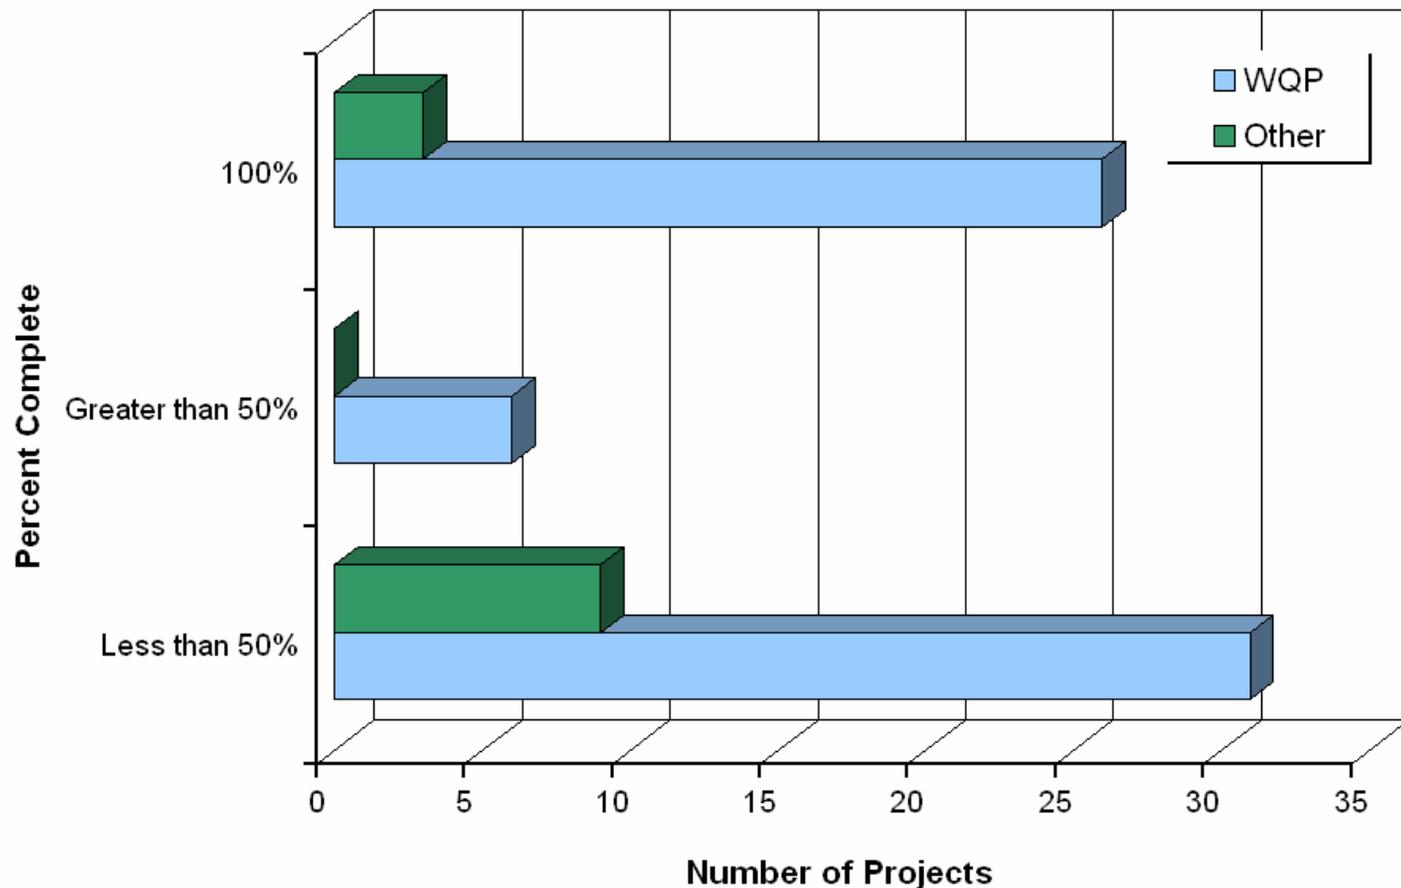

- Administrative measures *ROD, 2000*
- ROD commitments
- Water quality targets
  - “...50µg/L bromide and 3.0 mg/L total organic carbon...or an equivalent level of public health protection” (ELPH)*
- Treatment technologies

*ROD, 2000*

# Administrative Measures – \$78M in WQP Funding

# Majority of WQP-Funded Projects are Still in Process

# Progress Toward ROD Commitments – Many Complete, Others Still in Process

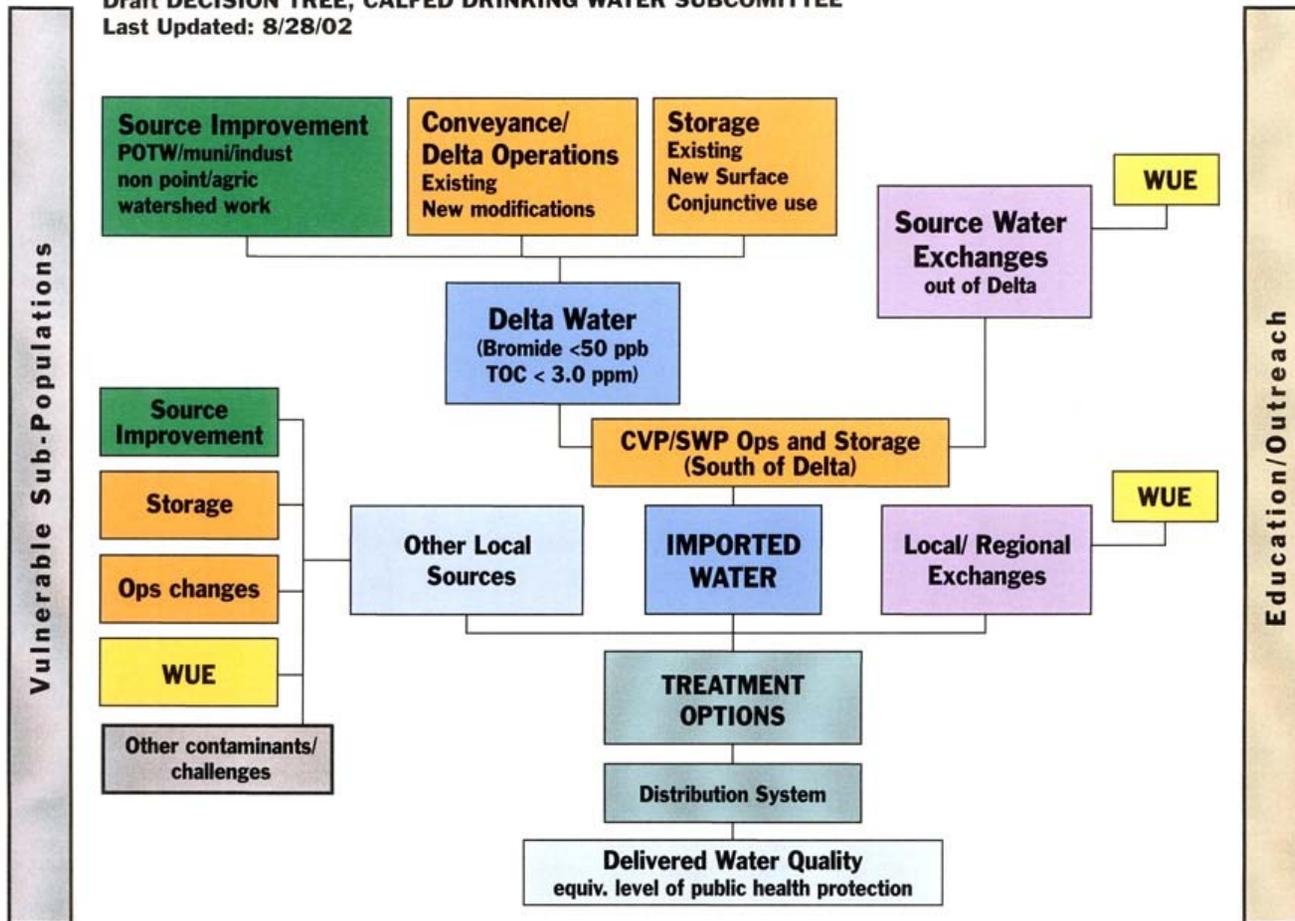

- **San Joaquin Valley  
Drainage**
  - 10 projects, \$5.3M, early stages
- **Source Controls**
  - 33 projects, \$30M, early stages
- **Drinking Water  
Subcommittee**
  - Ongoing effort, adequately addressed
- **Treatment Technology**
  - 4 projects, \$1.9M, commitment fulfilled\*
- **Conveyance Runoff**
  - 8 projects, \$17M, commitment fulfilled\*
- **North Bay**
  - 2 projects, \$600K, commitment fulfilled\*
- **Recirculation**
  - Pilot study completed

# Progress Toward Water Quality Targets

- Existing water quality exceeds ROD targets for bromide and organic carbon
- Majority of WQP-funded projects support progress toward water quality targets
- Too early to see actual improvements in water quality and ELPH
- Ongoing efforts needed in source protection and ELPH

# Shift Toward ELPH Will Provide Framework for Prioritization

**EQUIVALENT LEVEL OF PUBLIC HEALTH PROTECTION**  
**Draft DECISION TREE, CALFED DRINKING WATER SUBCOMITTEE**  
 Last Updated: 8/28/02

# Progress on Treatment Technologies

- Promising demonstration projects
  - UV disinfection
  - Ozonation
  - Ion exchange resins
  - Desalination of agricultural drainage

*Water Tech Partners  
and UCD*

# Conclusion – Progress on Understanding of Drinking Water Quality

- Recommendations:
  - Continue to support monitoring and assessment tools.
  - Shift focus from ROD commitments to regional ELPH plans.
  - Make performance measures a high priority.
  - Better understand the role of environmental justice and tribal interests.

*DWR*

# Conclusion – Need for Realistic Schedules and Expectations

- Recommendations:
  - Develop realistic expectations on schedules for grant funding.
  - Shift focus to on-the-ground improvement projects where timely.
  - Prioritize efforts based on a reduced level of funding and focus on direct improvements.
  - Develop performance measures specifically to track contributions of individual projects.

# Conclusion – Need Better Coordination between Projects & Program

- **Recommendations:**
  - Include implementing agency staff resources in funding process to facilitate coordination.
  - Facilitate knowledge sharing and integrate project results into broader WQP framework and strategy.
  - Provide additional communication forums, including website, brown bag series, and topic-specific workshops.

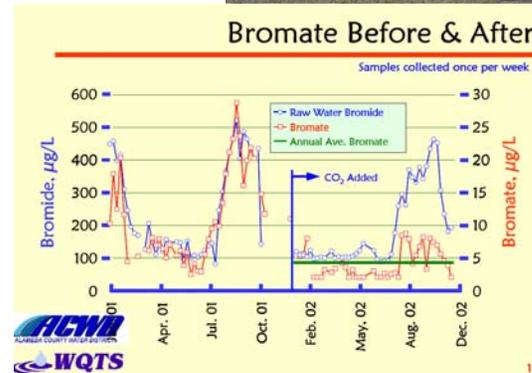

# Conclusion – Central Valley Drinking Water Policy Project Critical

- Recommendations:
  - Continue WQP support through basin planning phases.
  - Use tools to further educate on linkage between source water and treated water quality.

# Conclusion – Treatment Technology ROD Met, but Future Role Unclear

- Recommendations:
  - WQP re-evaluate role in treatment technology.
  - Consider scale, transferability, treatment processes, and community size.

*Alameda County  
Water District*

# Conclusion – Shift Toward Regional ELPH Planning is Appropriate

- **Recommendations:**
  - Fund and facilitate development of regional ELPH plans and synthesis of plans to inform goals and priorities.
  - Use plans to inform performance measures.

# Questions/Discussion
